

Introduction:

This document will serve to document a study of five unique IT service desk tasks through the usage of screenshots of the work and descriptions of the steps needed to solve each ticket. These scenarios do not involve any real people or real personal information; however, they do closely mirror standard IT practices that are used in field. Credit belongs to <https://servicedesk-simulator.com/> for the simulated tasks, and I strongly recommend this website for practice.

Some important things to note before diving in, each ticket must start with an identity verification. This will be discussed and shown in case 1 but will be remitted from the other tickets in the interest of being direct about solutions. Each ticket also should be verified to be solved with the user. The simulation will prompt you when the issue is resolved by the proper steps but in the real world there is not pop-up for a problem solved so proper verification of solution should be used. You will see this occurs in case 1 but is again a constant and will be removed from future cases for directness. Some cases may not need verification of solution, for example, changing a name can be seen directly on IT end and should be followed up with a thank you and inquiry about any other issues.

Case 1: Printers Not Working:

We will start off with a classic IT issue, connectivity to printers in the office. The user, Dorothy, claims that none of the printers throughout the entire building are working. This is marked as a high-priority ticket, due to larger business-related impacts.

Reported by: Dorothy Martinez (dmartinez@servicedesk-simulator.com)
Department: Legal | Location: Floor 2
Contact: x4521

Issue Description:
None of the printers in the office are working! Every printer in the building shows offline. We tried sending jobs from a few floors and nothing prints anywhere. It was working yesterday evening.

Business Impact:
Legal team needs to print contracts for signing. Executive presentations cannot be printed.

The first thing every ticket must start with is identity verification. This interaction occurred via a submitted ticket to ensure continuity; we must send the user a 2FA code to their listed number. This information can be found then directly verified in the directory, essentially a large database of employees and their associated profile, groups, licenses, devices (including peripherals), and authentication information. The user sends the 2FA code through the “Teams Chat” window.

The screenshot shows a web interface for a user directory. At the top left is the 'DIRECTORY' logo. A search bar at the top right contains the text 'dor'. On the left, a sidebar lists 'ALL USERS (1)' with a single entry 'Dorothy Martinez dmartinez'. The main content area has a vertical menu on the left with options: 'MANAGE', 'PROFILE', 'GROUPS', 'LICENSES', 'DEVICES', and 'AUTHENTICATION' (which is highlighted). To the right of this menu, the user's profile is displayed. It includes a circular avatar with the initials 'DM', the name 'Dorothy Martinez', and the email 'dmartinez@servicedesk-simulator.com'. Below the profile information, there are two sections: 'Actions' and 'Authentication methods'. The 'Actions' section contains four buttons: 'RESET PASSWORD', 'LOCK ACCOUNT', 'RESET MFA', and 'DISABLE ACCOUNT'. The 'Authentication methods' section shows 'MFA status' as 'Enrolled' and 'Password expired' as 'No'. At the bottom, there is an 'Identity Verification' section showing a green checkmark and the word 'Verified'.

Identity Verification

Verified

Once the identity is verified, we can begin the investigation. The user mentioned all printers did not work across floors and also mentioned “we” implying that multiple users are running into the same issue. This causes the place we look to be the “server room” tool. This tool will show all the overall health, network topology, available devices on the network, and company servers. Looking at the server tab, it is clear the print server is experiencing some sort of outage. Resetting the server is the next step to take and this will resolve our issue.

SERVER ROOM

EXCH01	Mail Server	Server Room A	55%	75%	ONLINE	...
PRINT01	Print Server	Server Room B	95%	90%	DEGRADED	...

REBOOT

SHUT DOWN

Upon seeing the print server is back online, we should take a moment before closing the ticket to verify with the reporting user that the error is resolved. This is a good real-world practice that ensures a correct solution and creates a friendly bridge between the end-users and the IT technicians working on the issues.

Quick replies...

The key takeaways for this ticket are verifying a user before anything, checking the server for a stuck server, and rebooting the server. Obtaining user verification is a critical final step here. Each case will have a “Close Ticket” window with notes describing the steps we took to solve the issue. The “solution complete” screen also appears for every ticket and will be omitted due to its redundant nature. The close ticket window cannot appear without a correct solution anyway.

 Close Ticket

RESOLUTION NOTES (optional)

- Verify the users identity (Use directory to find the user the initiate a 2FA)
- Check the server room for a stuck mail server
- Reboot the server
- Check with user if issue is resolved

Cancel

Close Ticket

CASE 2: Incorrect Clock on User End

Case 2 shows a user with a high-priority ticket who describes a situation where the system clock does not match their local time, leading to them being generally confused

and even missing meetings. The user has also tried to restart their computer and mentions the system is in EST, and they are located in CST.

INC0012865 HIGH

CLOCK ON MY COMPUTER IS WRONG AND MY MEETINGS ARE ALL MESSED UP OPTIONS ...

ASSIGNEE  AyoCoop2  UNASSIGN

Reported by: Kevin Park (kpark@servicedesk-simulator.com)
Department: Sales | Location: Floor 2
Contact: x5580

Issue Description:
The clock on my computer is wrong! I'm in Central time but somehow my computer is set to Eastern. The minutes look off too by a couple. All my Team Chat meetings are showing up at the wrong times and I missed one already.

Troubleshooting performed by user:
- I noticed it's set to Eastern but I'm in Central
- Restarted my computer - no change

Business Impact:
Missing meetings due to wrong timezone. File timestamps incorrect. Three more meetings scheduled this afternoon.

After doing identity verification, we will remote into their system. This is because the user has given a clear resolution to the error that will involve some system settings. Rather than guiding them through the process, we will do it ourselves to reduce confusion.

Once we remote in, we can navigate the desktop to the settings tab. This remote closely resembles a windows operating system. We can then navigate the settings to the “Time and Language” tab where we will see a dropdown to change the time zone. We will change this to CST and prompt the computer to sync the clock which will resolve the issue for our user. Here we can see the change has taken effect so a verification is not needed

though a salutation should be extended to our reporting user.

The key takeaways here are verifying our user, remoting in (using our admin credentials), and setting the system settings to the appropriate ones for our user.

CASE 3: New Employee

For case 3 we have a medium priority ticket, which sees a user requesting the creation of an account for a new employee joining the company. This user has done an amazing job filling out all the required fields we will need for creation, if this was not the case, we would follow up with the creator of the ticket in order to gather all the information needed. This new user will also need to be assigned to groups.

NEW EMPLOYEE STARTING MONDAY - NEEDS ACCOUNT SETUP

OPTIONS ...

ASSIGNEE

UNASSIGN

Submitted by: Robert Torres (rtorres@servicedesk-simulator.com)
Request Type: New Hire Access Setup

Employee Details:

- Name: Jennifer Torres
- Username: jtorres
- Email: jtorres@servicedesk-simulator.com
- Start Date: 2026-02-10
- Department: Engineering
- Manager: Tom Wilson
- Position: Junior Developer

Please create this employee's Directory account and provision the following access:

- Engineering group
- VPN-Users group
- CodeRepo-Access group

Note from HR: Employee will need access ready by 9 AM Monday for orientation.

After verification of the reporting user's identity, we will remain in our directory and create the new user by filling in the information provided to us. Being careful not to misspell

or mislabel any of the information is critical to creating the correct user.

 **Create New AD User**

Full Name *

Email

Department

Job Title

 **Create User**

Cancel

Once this new user is created, they will show up in the directory. From here we can navigate to their “groups” tab and align them to the correct groups they will need for their

job.

The screenshot displays a web interface titled 'DIRECTORY'. At the top, there is a search bar containing the text 'robert' and a user icon. The interface is divided into three main sections:

- ALL USERS (3):** A list of users with the following details:

Name	Username
Robert Torres	rtorres
Robert Johnson	rjohnson
Robert Taylor	rtaylor
- MANAGE:** A vertical menu with options: PROFILE, **GROUPS** (highlighted), LICENSES, DEVICES, and AUTHENTICATION.
- User Profile:** A section for 'Jennifer Torres' with email 'jtorres@servicedesk-simulator.com'. It includes a 'Group memberships' table:

GROUP NAME	ACTION
Domain Users	
Engineering	×
VPN-Users	×
CodeRepo-Access	×

At the bottom of the 'Group memberships' section, there is a dropdown menu labeled 'Add to group...' and a blue 'ADD' button.

This task was straight forward and did not involve a true second party, the created user was out of the loop since they had not yet started. This case saw the entire process remain in directory the entire time providing solid practice with this portion of IT. The key takeaways being to always verify the users, adding a user to the directory, then editing their group privileges.

×

Close Ticket

CASE 4: Moved Teams and Cannot Access New Resources

In this case we have a medium priority ticket involving two parties, a Tom who appears to be a manager of some other employee named Kavita. The manager explains Kavita is moving to a new team and will need new accesses as well as her old accesses revoked. He also notes that HR will handle some of the load, so we only need to worry about the explicit work.

Request Type: Access Modification - Department Transfer

Employee Details:

- Name: Kavita Patel
- Username: kpatel
- Current Department: Engineering
- Transfer To: IT Infrastructure
- Effective Date: 2026-02-05

Kavita is transferring from Engineering to IT Infrastructure. Please update her access accordingly - she will need infrastructure tool access for her new role, and her previous Engineering access should be revoked per security policy.

Department and reporting line changes will be handled by HR separately.

Note from Manager: She starts in the new role Wednesday. Please have access ready by morning.

A unique step here is we must verify BOTH identities That of Tom the manager as well as our impacted user. A simple follow up will go a long way to prevent confusion and

mistakes.

After doing both identity verifications, we will remain in directory and get those changes handled. It generally does not matter what order you take, practically though a company policy might indicate a specific course of action. For this scenario, we will work in order of requests, starting with adding access. Then the removal of the previous group. A note here as well, the removal from group resources will require a confirmation though the addition of accesses will not so a IT person must be mindful of this.

CASE 5: Legal Name Change

In this case we see a low-priority ticket to close our study out. This user recently got married and as such needs a name change, specifically, a last name change. The format by which this company assigns emails means her email address must also be updated and her old email be aliased to send to her new one.

Submitted by: Amanda Foster (afoster@servicedesk-simulator.com)

Request Type: Account Update - Legal Name Change

Employee Details:

- Current Name: Amanda Foster
- New Legal Name: Amanda Reyes
- Username: afoster
- Department: Finance

Hi IT, I got married last month and have legally changed my last name from Foster to Reyes. Could you please update my account?

- Display name should read "Amanda Reyes"
- New email address: areyes@servicedesk-simulator.com
- Please keep my old address (afoster@servicedesk-simulator.com) working as an alias so I don't miss replies to older emails.

HR has already approved the name change and updated my records. Thank you!

After verifying the identity of this user, we can remain in directory and find the “profile” tab. Through this we can update the display name, assign the new email address reflecting the correct name, and finally alias her old email address. We can then save these changes and immediately see the fix go through. You will see we received an achievement for successfully completing our 10th ticket, 5 of which came from this study.

Conclusion:

In conclusion, through this study of five routine IT tickets we were able to develop skills relating to entry-level service IT. No tickets today required escalation, or external communications, and mostly revolved around navigating and effective usage of the directory. We were able to find users, verify them, update their personal details, edit their groups, and create entirely new users. We also got practice using a remote desktop including signing in and navigating the system. This study saw us use the server room and reset a server in a responsible way that did not add unnecessary downtime. Finally, we were able to practice professional and efficient communication to our clients.
